

Website & Shared Database Hosting

Your website is a critical part of your business. Yet that doesn't mean you always need the power and space – not to mention cost – of a dedicated server to store and run your web presence.

What is it?

Our shared hosting customers share a platform with other users in a secure environment. Servers are maintained by our system administration team, allowing you to relax in the knowledge that your IT investment is protected and operating trouble-free.

Product Features:

- Secure hosting environment
- Flexible load sharing
- Windows and Linux platforms
- Customised 404 (error) pages
- Online Web Statistics
- Dedicated 24/7 support
- Additional IP Addresses
- Bulk traffic and bandwidth plans
- Daily Server Back Up
- Payment Services

How does it work?

You choose from one of our Shared Hosting plans depending on the level of traffic going through your website or database, the disk space you require, and the software you need.

Our Plans

	Space	Traffic
Starter	1GB	10GB Traffic
Intermediate	2GB	20GB Traffic
Primium	3GB	30GB Traffic

Shared Web and Database Hosting Features

Windows Platform Features	Linux Platform Features
Microsoft ASP and ASP.NET 1.1/2.0	PHP5, x, Perl, Python, Ruby, CGI
.Net	MySQL database support
Windows Server 2008, IIS 7	Ubuntu Server LTS
SSI Scripting	
MS SQL	

You have the option of combining our shared hosting service with one of our other products, such as domain name and email services, to ensure your web content is unified and professional.

If necessary (larger websites or those with high traffic requirements, in particular), we can also move your website onto a dedicated or virtual server with a customised hosting plan.

Will it suit me?

Your website is configured onto a shared server in a OneSquared secure data centre, providing both physical and Internet security, as well as taking care of those all-important back-ups. We look after the hosting platform leaving you to concentrate on your content, customers and business.
