Domain Names

For many businesses, a visible, easily-found online presence can be as important as physical premises. Online visibility begins with a simple, memorable and affordable domain name.

What is it?

Our Domain Name Services are about identifying, securing and maintaining Internet domain names and addresses.

OneSquared covers almost every domain registry in the world. Please refer to www.onesquared.net for a full listing.

We also provide a fully outsourced registry infrastructure service, including complete design, registry software, name server management, and web interfaces. Our services are also designed to give you control.

Using our web-based Domain Management Toolset (DMT) you can:

- Search for domain names
- Register active domain names
- Register inactive domain names (commonly known as 'parking')
- Transfer the hosting of an existing domain name from another Internet Service Provider to OneSquared, aggregating all assets in one location
- Add new mailboxes, domain names, and even entire websites yourself with OMNISCIENCE, the OneSquared self-management tool
- Identify similar domain names to yours, and buy them to prevent others from passing off their website as yours
- Bulk manage your domain name assets
- Source available addresses across multiple registries (eg. name.nz, name.com, name.com.au, and so on)
- Secure single domain name registrations, or entire suites of names.

How does it work?

Most customers simply register their preferred domain name/s through the OneSquared website. For customers with complex domain name requirements we can develop a domain name strategy to ensure these assets are well protected and fully utilised. Once your names are registered, our Domain Management Tools (DMT) makes ongoing management easy.

OneSquared also provides advanced domain name services for customers or domain name agents wanting to fully outsource this service. With access to our infrastructure and web based management tools for your customers, we have a turnkey solution.

Why should I use it?

Whether you are concerned about securing your web presence against those who would pass off their websites as yours, or looking to maximise your visibility in an increasingly cluttered space, OneSquared domain name services are a key component in your armoury.
