

ISP Services

Our Managed ISP Services give our customers access to infrastructure on a shared basis to provide everything a company needs to stay connected in the online world, without the high costs of hosting or managing the necessary systems themselves.

How does it work?

For a moderate monthly fee you enjoy access to any combination of the following tools:

- Shared Website & Database Hosting
- Domain Names
- Email Services including spam and virus checking, plus mobile mail
- Back-up Solutions
- Payment Services
- Digital Certificates
- Faxme

You also have access to a team of dedicated IT professionals to maintain your systems and provide regular upgrades in equipment and software. The level of monitoring and speed of response will depend on the Service Level Agreement you select.

Why should I use it?

Because you want the best of both worlds:

1. Robust, high performance communications that includes internet, email, telephony and mobile connectivity, coupled with ongoing monitoring, updating, maintenance and service.
2. Minimal costs and worry.

Will it suit me?

Our Managed ISP Solutions typically suit small to medium sized businesses for whom IT infrastructure is important to the running of the business, without the need for dedicated mission critical infrastructure.
